Class 4: Using Processing with Gmail API

We will look at some code and write some code.

How to use additional non-Processing Java Libraries?

- Create a folder labeled “code”
- Put the JAR files inside the folder

Using Gmail API

- Get the necessary codes from me
- Create a Gmail account (others also work but it is easy with Gmail) if you do not have one
- Update the “config.xml” with your information

Main structure of an email:

- Sender
- Subject
- Body

Assignment due Monday

Bring a new project

Improve the “DoSomething” function

On Monday, we are going to connect the email Arduino
